Operations Systems & Automation Analyst | Workflow Automation | Systems Integration | API-Oriented Operations

PROFESSIONAL SUMMARY

Operations systems and automation professional with experience owning production workflows, internal platforms, API-connected processes, bot operations, and cross-functional system improvements in logistics environments. Strong at inheriting unclear or undocumented processes, diagnosing operational failure points, and turning them into reliable automation, monitoring, documentation, and stakeholder-ready workflows. Background combines logistics operations, systems troubleshooting, workflow automation, and technical coordination across operations, IT, vendors, and business users.

CORE STRENGTHS

Workflow Automation n8n workflows, bot operations, email/file routing, exception handling, operational logging	Systems Integration API-oriented workflows, data movement across platforms, EDI/status monitoring, Postman testing	Operations Reliability failure investigation, undocumented system stabilization, production issue resolution
Business Translation technical liaison across operations, customer service, IT, vendors, and external partners	Data & Process Quality validation logic, duplicate prevention, mapping rules, reconciliation, structured reporting	Platform Ownership Monday.com, Gmail/Google Workspace, logistics platforms, cloud/internal tooling

PROFESSIONAL EXPERIENCE

Systems & Automation Analyst (Operations Platforms) | Logistics Alliance Mar 2023 - Present
Promoted from intern into expanded ownership across automation, operational systems, and integration workflows.

- Own and improve production workflow automations that support logistics execution, system-to-system updates, shipment intake, dispatch routing, operational logging, and downstream process reliability.
- Built purchase-order validation automation that compared emailed PO reports against shipment records, processing 33,910 purchase orders across 25 operational runs with zero processing errors and a 92.7% adjusted match rate.
- Built and maintained carrier dispatch automation that processed 12,323 records in 21 days, managed routing across 34 active carriers, and handled peak daily volume of 988 records while reducing manual file triage.
- Supported high-volume shipment automation covering 24,545 production shipments across 359 vendor numbers and 426 vendor/site names, helping standardize request handling across a complex logistics network.
- Inherited and stabilized undocumented legacy workflows by reverse-engineering logic, dependencies, data-mapping rules, and failure points to restore reliability and prevent repeat operational issues.
- Converted a legacy Windows-based API process into a modern workflow automation, preserving business logic and validating the solution through live operational testing with external stakeholders.
- Coordinate with operations, customer service, IT leadership, external vendors, and third-party developers to define requirements, troubleshoot failures, validate changes, and keep automation changes production-safe.
- Replaced manual and fragmented email/Excel logging with centralized monitoring, documentation, and Monday.com-based visibility, improving traceability for automation outcomes and exception handling.

Material Handling Supervisor | FCA Chrysler

2017 - 2023

- Coordinated material flow in a high-volume manufacturing environment, supporting time-sensitive inbound logistics and continuous assembly-line operations.
- Planned daily team priorities to prevent production bottlenecks, reduce redundant movement, and maintain operational flow across warehouse and assembly areas.
- Built strong process awareness in a highly automated plant environment, developing the operational mindset now applied to workflow automation, reliability, and systems improvement.

Founder | Gamessories Corp.

2020 - 2022

- Built and operated an e-commerce business, owning website configuration, order flow, supplier coordination, customer support, and fulfillment processes.
- Managed sourcing, procurement, pricing, inventory decisions, and marketplace operations while using digital tools to support sales and customer acquisition.
- Developed practical experience translating business needs into working systems, process documentation, and customer-facing execution.

TECHNICAL SKILLS

Automation & Workflow Orchestration: n8n, bot automation, workflow automation, Monday.com automations, internal tooling

Systems Integration & APIs: REST APIs, API orchestration, Postman, EDI transactions, SQL, DB Visualizer

Cloud & Infrastructure: AWS, Google Cloud, Azure, RDP, VPN, TeamViewer

Operational Platforms: Monday.com, Jira, Sage, Vena, WordPress, Google Workspace, Microsoft Office, Microsoft Teams

Security & Support Tools: ESET, remote access support, endpoint troubleshooting

EDUCATION & CERTIFICATIONS

AWS Certified Cloud Practitioner

Amazon Web Services | 2026

Computer Systems Technology - Software Development & Network Engineering (Advanced Diploma)

Sheridan College | 2021 - 2024

Honours Bachelor of Arts - Health Studies (Major), Geography (Minor)

York University | 2015 - 2020
